DOWNTOWN REVITALIZATION Update: Soil Investigation

Project background:

The design consultant, Accardi Engineering Group is currently working on the Downtown Revitalization detail design. This phase of the project consists of undertaking detailed design and soils testing, all which will lead to the construction of new infrastructure and the beautification of the downtown core.

What's next:

This week from November 17 to 22, 2025, a subcontractor from Terrapex Environmental Ltd will be performing soil investigation along Main Street from Park Drive to Edward Street. This investigative work is required during the detail design phase to ensure structural stability, prevent costly failures, and comply with regulations during construction.

Impact on residents:

There will be minimum traffic impact during this investigative work. Please use extra caution in the area during this time as there will be workers present. There will be a two to three parking spots occupied temporarily for a few hours and will be moving in segments during this investigative work for the subcontractor to park their vehicle and or equipment.

The Town appreciates your cooperation and patience during this work.
